

## Day-use trail priorities

Priority levels		Description
1	Highest	Main trunk trails or heavily used trails, or take visitor to <b>major attraction. Closure has major impact on many visitors.</b> Sweep every spring, possibly once more during summer. <b>Maintain/repair immediately</b> when needed. <i>The world stops when something happens on these trails</i> . Examples: Pyramid Island, Athabasca Falls, Path of the Glacier, Toe of the Glacier.
2	High	Medium-high use trails. Closure has some impact on moderate number of visitors. Sweep every spring. Perform <b>minor maintenance (eg fallen trees) within days.</b> Perform <b>major repairs as soon as possible</b> when needed. Examples: Valley of the Five, Easy trails, Sunwapta Falls.
3	Medium	Sweep every spring. Closure has some impact on lower number of visitors. For <b>minor maintenance (eg clearing fallen trees) attempt to fix in 1-2 weeks.</b> When major maintenance/repair is required, create plan for repairs in same season. Examples: Dorothy/Christine, majority of Pyramid Bench trails.
4	Low	Not swept or cleared regularly. Attempt to maintain/repair in same season if possible. Example Palisades Lookout, Signal Mt Lookout
5	Lowest	Only maintained if resources allow. Trail may not be maintained for several years. Or maintained by others.

## Overnight trail priorities

Priority levels		Description
1	Highest	Main overnight trails. <b>Closure has major impact on many overnight users and it results in</b> many permits having to be rebooked. Sweep every spring, possibly once more during summer. Check all campgrounds, bear poles and toilets during sweep. <b>Maintain/repair major issues such critical bridges and campground issues as soon as possible</b> when needed. <b>Change toilet barrels or dig new privies immediately when reported full.</b> Examples: Skyline, Tonquin, Maligne Lake, Brazeau.
2	High	Medium-high use overnight trails. Some are also popular day-use trails. Closure has some impact on moderate number of backcountry users, and in some cases, moderate number of day users too. Sweep every spring. Perform <b>minor maintenance (eg fallen trees) within 1-2 weeks.</b> <b>Change toilet barrels or dig new privies within a week when reported full.</b> Perform <b>major repairs during the same summer</b> when needed. Examples: Big Bend, Jacques Lake, Fryatt.
3	Medium	Closure impacts moderate number of visitors, but impact is relatively large due to length of trip/trail. For <b>minor maintenance (eg clearing fallen trees) attempt to fix in 2-3 weeks.</b> Change toilet barrels or dig new privies in 1-2 weeks when reported full. When major maintenance/repair is required, create plan for repairs in same season. Examples: Poboktan trail, Fiddle River from Utopia Pass to Utopia CG.
4	Low	Not swept or cleared regularly. Change toilet barrels or dig new privies within 2-3 weeks when reported full. Attempt to maintain/repair issues in same season if possible. Example, Geraldine past first Lake, Fiddle River past Utopia.
5	Lowest	Only maintained if resources allow. Trail may not be maintained for several years. Eg, North and South Boundary, Athabasca Pass after Whirlpool Campground.

## Winter trail priorities

Priority levels		Description
1	Highest	Main ski hubs. Closure impacts high number of winter users. Sweep in fall before first snow for deadfall and shrubs growing on trail. Remove any deadfall immediately. Examples: Whirlpool and Marmot Meadows hubs.
2	High	Medium-high use trails. Closure has some impact on moderate number of winter users. Sweep in fall before first snow. Perform <b>minor maintenance (eg fallen trees) within days</b> . Perform <b>major repairs as soon as possible</b> when needed. Examples: Valley of the Five, Easy trails.
3	Medium	Sweep in fall before first snow. Remove any deadfall and growth on trails. Remove deadfall within a week if reported. Example: Trapper Creek trail, Summit Lakes.
4	Low	Not swept or cleared regularly. Attempt to maintain/repair major issues in same season if possible. Examples: Big Bend, Bald Hills.
5	Lowest	Only maintained if resources allow. Trail may not be maintained for several years.

## Priority levels for backcountry bridges

Priority levels		Description
1	Critical	Critical bridges on heavily used backcountry trails, or take visitor to <b>major attraction</b> . <b>Bridge closure shuts off access to the rest of the trail and has major impact on many backcountry users, which would need to be rebooked onto other trails.</b> Sweep every spring. <b>Maintain/repair immediately</b> when needed. <i>The world stops when these bridges go out</i> . Examples: Brazeau Lake and Brazeau River bridge on Brazeau loop. Sunwapta Falls bridge.
2	High	Medium-high use bridge. Closure will cut off access during periods of high water, esp for hikers. It has some impact on moderate number of visitors. Sweep every spring. Perform <b>major repairs as soon as possible</b> when needed. Examples: Cavell Lake and Circus Creek.
3	Medium	Bridge is important for hikers, but there may be a reroute available, or the trail is very low use. Eg, Mural Creek, Wates-Gibson trail bridge.
4	Low	Bridge may be important to hikers, but since the trail is very low use, it may not be replaced immediately, if at all. Examples: Chown Creek, Southesk River.
5	Lowest	Bridge will not be replaced if it goes out. Currently: Blue Creek, Gendarme, Carcajou Creeks on NBT

--
